

METAL INSETS WORK WITHOUT METAL INSETS

Metal insets is a very popular work in our class.

For conducting this activity, you will need the things shown in the following picture.
(For shapes you can use bowls, tupperware, lids etc.)

Through this activity, children learn how to control their hand movements as they try not to go out of the line. This is also a good exercise to enhance their aesthetic sense, mechanical writing skills and is a preparation work for geometry.
